

H1
MountingHole

- Two assembly options:
- Cathode is directly connected to ground, most of the radios.
-> assemble D2, D3, R3, omit R2
 - Cathode is not grounded. You need to check which heater pin is connected to chassis GND
-> omit R3
-> connect grounded heater pin to GND on R3 pad.
-> if dc bias on cathode is needed, calculate resistance and place on R2. Otherwise omit it.

Based on Retronics 6U5
